To: All Training Officers of the Agency

LARGE SCALE SYSTEMS ANALYSIS (LSSA)

(Full Title: Systems Analysis, Operations Research,
and Automation in the Control of Large Systems)

The Large Scale Systems Analysis (LSSA) Course, sponsored by DDS&T under contract with Wiley Systems, introduces the main features of large systems theory and application. Through examples and demonstrations it will present terminology, current research, and the application of certain advanced management methods which have proven useful in the management or control of government, private industry, social, and other large systems. Instruction will involve the application of operations research methods to several problem areas as well as a familiarization with techniques such as queuing theory, linear programming, simulation, and decision theory; the application of these techniques to problem solving will be stressed. The course should give the student a philosophy and understanding of the nature and current state-of-the-art of large systems management and a knowledge of systems techniques applicable to Agency needs.

DATES : 6 - 10 November 1972, 0900 - 1630 hours

LOCATION : Room 236, Chamber of Commerce Building

FOR : Middle and Senior Grade professional personnel from all Directorates and the Office of the Director.

CLASS SIZE : 28 (maximum)
